

AAO Foundation Award Final Report

Principal Investigator	Robert Sheffield, DDS
Co-Investigator	Kang Ting, DMD, DMSc and Mary Trahar, DDS
Secondary Investigators	Henry Kawamoto, DDS, MD
Award Type	Biomedical Research Award
Project Title	Cephalometric evaluation of the craniofacial complex in patients treated with an intraoral distraction osteogenesis device: A preliminary report.
Project Year	1998
Institution	University of California at Los Angeles
Summary/Abstract	<p>The research outlined in this final report was published in the AJO-DO vol 124, no. 6, December 2003. The project was completed by a resident who took over the project after I graduated. She is listed as first author in the article.</p> <p>The purpose of this project was to evaluate, cephalometrically, the efficacy of an intraoral distraction osteogenesis device in treating patients with unilateral mandibular hypoplasia. The patients were followed for a two year period.</p> <p>I hope this provides you with the information that you need. I am sorry that our previous submissions were not received by the appropriate people.</p>
