

AAO Foundation Award Final Report

Principal Investigator	David Dean, PhD
Co-Investigator	Mark Hans, DDS, MSD
Secondary Investigators	B. Holly Broadbent, DDS Suchitra Nelson, PhD
Award Type	Biomedical Research Award
Project Title	Creation of an Internet-accessible Bolton-Brush Growth Study WWW (World-Wide-Web) Digital Cephalogram Database
Project Year	1995
Institution	Case Western Reserve University
Summary/Abstract	The project results in the creation of a Broadbent-Bolton Growth Study Center (BBGSC) World-Wide-Web (WWW) site. This Internet accessible site presented an easy-to-use software interface to the Orthodontic community by which practitioners and research scientists could search the database of Bolton "normal" cephalograms necessary for applicability to cephalometric research. This allowed many researchers to determine whether it would be worthwhile to visit the BBGSC to study the actual images, most of which are now available in digital form.
